Precautions against Lyme + Tick borne illnesses

Lyme disease and other tick related illnesses are on the rise in Connecticut, according to State agencies research.

Awareness + Prevention are key factors in reducing your risk to tick bites.

TNT LANDSCAPING + EXCAVATION LLC is a Connecticut State Licensed Pesticide Applicator, B-3485. They provide season long comprehensive Tick Prevention Programs for your lawn and landscape areas, including organic options.

Suggestions from the CDC include:

- Reduce vegetation overgrowth near patios, pools, and areas pets and children play
- Spray borders and edges of lawn and yard areas with acaricides or organics
- Reduce deer traffic in your yard

The GOOD news:

TNT not only sprays to prevent tick exposure, they install features designed to maximize your outdoor space safely; design garden areas attractive to birds but, not deer; and offer a wide variety of services to help keep you, your children, and your pets safer this season.
